Old Distributor for Firenet & Hochiki

Obsolete Hochiki Products

20 June 2009

Please note the following products have ceased manufacture since October 2006 and are **NO** longer available.

HRE products:

ALB-E Optical, AIE-AS Ionisation, ATA-E Thermal analogue detectors

AMU-A2A, AMU-C2, CHE-MLIG (CTX) devices

AMU-MBM, AMU-B2M, YBF-RL/3JM, YBF-RL/2NBF bases

.....

Conventional Detectors:

SLK-A Optical conventional

SIH-AM Ionisation detector

DCC-A, DFE-60B, DCC-C, DFE-90D Thermal detectors

YBF-RL/4AH4M, YBF-RL/4AH12 bases

The supply quantities for the above items are not known and supply quantities are on a Month to Month basis.

For further information please contact Jeffrey Palmer on 07 3252 5366 or 0414 629 417.

Old Distributor for Firenet & Hochiki

‘FireNet’ Fire Alarm System HRE Protocol Board

Until now many buildings fitted with Hochiki HRE protocol detection systems needing upgrades or modification to meet current fire and building standards have required the installation of complete new fire systems. Replacement of the entire fire system can be both expensive and disruptive to businesses. The ‘FireNet’ HRE board from Fire & Safety Products provides a cost effective solution which eliminates the need to replace your entire fire detection and alarm system.

The FireNet HRE board allows building owners to replace existing HRE protocol Fire Indicator Panels with a ‘FireNet’ Panel whilst retaining the existing Hochiki HRE protocol detectors and loop devices. Future system upgrades may be completed two loops at a time, using current Hochiki GTP protocol detectors and devices.

The ‘FireNet’ HRE board provides the following benefits:

- Gives the flexibility of spreading system upgrade costs over an extended period.
- Allows the integrity of the fire system to be maintained.
- Provides owners the opportunity to manage upgrade programs.
- Allows upgrades to be coordinated with tenancy changes.
- Reduces business disruption.

Listed with CSIRO on the Activfire register: afp-1373
